

Greenfiber® Presents

AGRITHERM®

Delivering Quiet Comfort
To Contained Livestock

Cellulose Insulation for Agricultural Structures

A New Product Born of 40 Plus Years of Experience and Expertise

Greenfiber® is North America's largest manufacturer of cellulose insulation. With over 40 years in the business, we have successfully grown via our dedication to bringing our customers innovative insulation solutions. Our products are made with 85% recycled paper which keep carbon locked in for the life of the product, while proving best-in-class sound abatement and enhanced comfort.

Like all Greenfiber® products, AGRITHERM® has been tested and proven to be a superior insulation product for agricultural structures. It excels in extreme hot and cold temperatures and provides a comfortable environment that promotes positive animal health and growth.

Properly applied, the high-density fibers create a thick blanket of insulation that sets up an effective barrier to air and sound transmission. These benefits make AGRITHERM® the ideal product to insulate new structures or to apply over existing insulations to increase energy cost saving.

Strategically Located Throughout the United States and Canada

Greenfiber® operates 13 regionally-based plants from coast-to-coast. Our conveniently located manufacturing sites allow us to simultaneously service multiple locations with the capacity to satisfy small, medium and large size installations. We provide field technical support to make your project go smoothly.

Scientific studies show that creating **low stress, high comfort environments**

for livestock produces better, more profitable results.

Designed for Agricultural Structures: Excellent insulation solution for all livestock

The application of AGRITHERM® in agricultural structures provides an excellent insulation solution regardless of building type or livestock contained.

- **Energy Efficient**
Reduces air infiltration and delivers superior R-value per inch vs. other insulations
- **Helps Absorb Odors and Reduce Sound Transmission**
Providing more comfort for animals, laborers and neighbors
- **Non-Corrosive**
Highly compatible for use contiguous with metal buildings and components
- **Exceptionally Effective in Low Pitch Roof Construction**
Buildings commonly found in agricultural use
- **Versatile Application**
Can be installed over any existing insulation

Warning: Agritherm does not meet the amended CPSC standard for flame resistance of cellulose insulation and is a Class II flame spread product. This product is designed solely for use in agricultural buildings and related structures. This product may not be used in or around a permanent or temporary household or residence, school, or recreational facility. This product is not produced or distributed for sale to, use or consumption by or enjoyment of a consumer. Any use of this product in or around a permanent or temporary household or residence, school or, in recreation, or otherwise is prohibited by Federal Law.
